

# Multi-channel Erase and Format Unit

MediaClone, Inc. has released its Multi-Channel SAS/SATA-3 and USB 3.0 Erase and Format Unit — the SuperWiper™. This is an industrial built unit with desktop style, 8 open insertion trays, extremely fast speed (average 8.2GB/min for a parallel run of 8 1TB WD Blue HDDs), and an eight inch Touch Screen color LCD display mounted on an elevated display pad that can be adjusted for height and viewing angle. It supports natively 8 SAS/SATA ports and 6 USB 3.0 ports. The unit does not have a network port or Wi-Fi connection, which protects against intruding malware. The unit also erases MMC via a flash media USB card reader and IDE HDD with the use of IDE to SATA adapters. The software operates in a very secure Linux OS environment. It also can erase storage media according to DoD 5220-22M or Secure Erase specs, which is recommended to erase SSD and flash drives. The application allows a user to run efficient operations with maximum throughput of erase devices. The user can choose to run a continuous erase mode where each port operates as a separate and independent operation or run in a batch mode where 8 HDDs run at the same time. The unit also supports formatting of the following file systems: NTFS, FAT32, exFAT, EXT4(Linux), HFS+(Mac).
